

SWARCO

MYCITY TMS

EFFICIENT TRAFFIC, LESS CONGESTION, IMPROVED AIR QUALITY AND MORE

TRAFFIC MANAGEMENT FOR SMALL AND LARGE CITIES

MyCity Traffic Management System (TMS) takes the stress out of managing traffic flows through small-to-large cities. Its user-friendly and intuitive interface makes it quicker and easier for you to proactively manage traffic through your city's roads. This will assist you in ensuring more efficient traffic flows, lowering the risk of congestion, reducing air pollution, shortening travel times, and getting more people to choose alternative forms of mobility.

MyCity can do it all.

CREATE SEAMLESS
TRAFFIC FLOW
IMPROVE **AIR**
QUALITY
CONTROL
YOUR CITY

Monitoring features enable you to oversee all your devices, keep track of journey times throughout the city, and assess air quality.

All this **data is presented** in user-friendly reports on the dashboard, helping you to make and implement **strategic decisions** with manual and/or scheduled

control functions, workflow and roadworks management, manual program switching, command hierarchies, scheduled commands, and much more.

OPERATOR AND PLATFORM BENEFITS

OPERATOR FRIENDLY

It's easy to use from a single sign-on system that gives you access to important data and reports via a user-friendly and intuitive dashboard.

EASY ACCESSIBILITY

The micro service-based technology is built on a brand-new platform and operated by SWARCO 24/7 in a secure cloud system.

PROACTIVE MANAGEMENT

Real-time and historical data reports enable you to implement strategic decisions with scheduled or manual control functions, workflows and roadwork management, and more.

FLEXIBLE INTEGRATION

MyCity enables data sharing and processing from different systems in an urban environment. It acts as an aggregator of mobility-relevant data sources and is a single point of contact for all interfaces. SWARCO also offers partnership management with data providers and ease your operational work.

MODULAR AND SCALABLE

MyCity is scalable and enables you can add new solutions when you need them or accommodate project-specific requirements.

- ACCESSIBLE ANYWHERE
- BUILT FOR USERS
- MICRO-SERVICES BASED
- SINGLE-SIGN-ON
- MODULAR & FLEXIBLE

CITY AND ROAD-USER BENEFITS

EFFICIENT VEHICLE MOVEMENT

Reduce travel times for road users by using real-time and historical data to plan and evaluate traffic flows and keep your city's traffic moving efficiently.

IMPROVED TRAFFIC SAFETY

Improved workflows and data processing mean you can proactively prevent many

incidents before they happen (such as a dangerous build-up of traffic resulting from a faulty signal), reducing the likelihood of accidents, or when there is an accident, priority can be given to emergency vehicles.

BETTER AIR QUALITY

Smoother traffic flows and less congestion mean reduced levels of vehicle emissions. MyCity TMS also helps you to prioritize public transport and/or cyclists so reaching your city's environmental goals becomes more realistic.

LOWER INFRASTRUCTURE COSTS

This modern planning tool will allow you to make better use of your city's existing infrastructure, rather than the costly alternative of building more roads.

TECHNICAL DETAILS

Core Functions	- User management - User profile - User groups - Single sign-on - Data Privacy & Security - Multi Tenancy - Search - Audit Log - Data Management - Data Source Manager
Device Management	- Device Management - Device creation & deletion - Device Groups
Permission Management	Permission Management
Standard functions	- Tenant configuration - Multi-screen support - Map as an Interface - Help Center - Dashboards
Audit log & search	Session log
Device integration	- PKI & device provisioning - OCIT-O - STCIP - ITC Remote panel - Senseview/NowWireless - AQ Detectors - Senseview/NowWireless - Journey Time - Senseview/NowWireless - Vehicle Detection - Swarm - Vehicle Detection - STS/RBS BL - Air Dec - Video Streaming - OCIT-C Client
Monitoring	- Alarm management - Alarm notification Configuration - On-duty calendar - Command log - Device states - TLC Monitoring - Device Message Log - Operational log - Camera monitor - Air Quality Monitor - Vehicle count monitor - Journey time monitor - Sub-System Monitoring - OCIT-C Sub System Monitoring
Data & analytics	- Configurable tables & exports - Simple TMS analytics - Signal Monitor - Dynamic Intersection Map

The Austrian-based traffic technology corporation, is a growing international group providing the complete range of products, systems, services and solutions for road safety and intelligent traffic management.
